LIBRARY REGULATIONS

(a) Books, periodicals and pamphlets may be borrowed by Fellows, Members, Licentiate Members, Associates and Affiliates personally or by a messenger producing a written order. The person to whom such publications are delivered shall sign a receipt for them in a book provided for that purpose.

(b) Publications may be borrowed through the post upon a written order. An acknowledgement of the receipt of such publications must be made on the form provided and returned to the Society immediately. Failing this, it will be assumed that the borrower has received the books, for which he will accordingly be held responsible. The postage of publications returned to the Society shall be defrayed by the borrower.

(c) A borrower may not have more than three publications in his possession at one time.

(d) A borrower will be considered liable for the value of any publication lost or damaged while on loan to him, and, if it be a single volume or part of a set, for the value of the whole work thereby rendered imperfect. Marking or writing in the publications is not permitted, and borrowers are requested to call attention to damage of this character.

(e) **Books and pamphlets may be retained for twenty-eight days. Periodicals may be retained for fourteen days. Applications for extension of the loan period must be made in writing before its expiry.** This loan period cannot be extended without application being made to the Secretary of the Society whose decision in this matter must be accepted as final and binding.

(f) Books and pamphlets added to the Library will not be lent until after the expiry of one month from the date received. The current number of a periodical may not be borrowed.

(g) Borrowers retaining publications longer than the time specified, and neglecting to return them when demanded, forfeit the right to borrow until they be returned, and for such further time as may be ordered by the Council.

Any borrower failing to comply with a request for the return of a publication shall be considered liable for the cost of replacing it, and the Council, may, after giving due notice to him, order it to be replaced at his expense.

No publication may be reissued to the same borrower until at least seven days have elapsed after its return, neither may it be transferred by one borrower to another.

(h) **Publications may not be taken or sent out of the United Kingdom.**

(i) Publications returned through the post must be securely packed and adequately protected.

EXPLANATORY NOTES

1. New or recent changes in presentation

(*a*) *Title of Volume*
Before 1958 this volume of the *Statistical Review* was entitled "*Part II, Tables, Civil*".

(*b*) *Table omitted*
The former **Table E1**, showing stillbirths by sex and legitimacy, was omitted from this volume in 1958. Figures for 1958 appeared in Table 23 of *Part I* and will continue to appear in that part of the *Statistical Review*.

(*c*) *New and revised tables*
In 1952 a new series of tables was introduced for the fertility analyses. Some of these were further modified in 1955 to 1957. Details are given in Note 5.

Before 1958, deaths under 4 weeks and under 1 year were included in **Table E**. They are now obtainable from **Table 13** in *Part I*.

Table M was extended in 1958, to include the numbers of persons marrying in conurbations and remainders of regions. Since then it has also shown the previous marital condition of men and women marrying, separately distinguishing the single, the widowed and the divorced instead of the combinations of groom's and bride's conditions, combining the divorced with the single.

A new series of tables of divorces was introduced in 1957, replacing the former **Tables P1** to **4.** They analyse the dissolutions and annulments of marriage made absolute during the year according to the following characteristics:

P1. Party to whom and grounds on which decree granted
P2. Present age of husband and wife (numbers and rates)
P3. Marriage ages of husband and wife in combination
P4. Wife's marriage age and duration (numbers and rates)
P5. Wife's marriage age and surviving children of present marriage
P6. Wife's marriage age and the marital condition of both parties before the marriage in combination.

In addition, the 1957 volume contained two supplements to these tables which, because of their complexity and consequent small cell sizes, it is intended to publish only at intervals of several years as more data accumulate:

Supplement to **Table P3.** Year of marriage and marriage ages of husband and wife in combination.

Supplement to **Table P6.** Husband's and wife's age at and marital condition before the marriage and calendar year of marriage.

Table T4 has been extended to show the number of provisional adoption orders. These provisional orders (see Adoption Act, 1958, section 53), which were introduced on the 1st April 1959, confer authority on a person not domiciled in Great Britain to take a child out of this country for adoption. **Table T5** has been condensed and now shows type of adopter by two categories only, i.e., parent and non-parent.

Table SS was modified in 1958, to show the ratio of deceased men and women whose marital condition was not stated to the total number of deceased instead of to the number with stated condition.

The international **Tables W, X, Y** and **Z** (formerly **Q**) were revised in 1958. **Table Z** now includes death rates.

2. Populations

The estimates of population appearing in this volume and described as "home" or "total" populations, have the following content:

Home population—the population, of all types, actually in England and Wales, distributed by area according to residence.

Total population—the home population *plus* members of H.M. Forces belonging to England and Wales and serving overseas but *excluding* the Forces of other countries temporarily in England and Wales.

3. Births

The births recorded and analysed for England and Wales for periods from 1939 onwards are those which *occurred* during the period. The numbers *registered* in 1959 are shown in the footnote to **Table B.**

For the classification by area (**Table E**), the births have been assigned as in previous years to the home address or area of permanent residence.

4. Birth rates

The national rates shown in **Tables C** and **D** are obtained by relating birth occurrences to the total population (before 1939, birth registrations to the home population; in 1914–19, birth registrations to the total population), while the rates in **Table E** are based on birth occurrences and home populations (see Notes 2 and 3 above).

The crude birth rates for local areas in **Table E** (col. 8) may not be comparable one with another. In the first place, the populations on which they are based may contain different relative numbers of women of childbearing ages. In order to eliminate differences between local birth rates due to this cause an Area Comparability Factor is calculated (as described on page 30 of the 1954 *Statistical Review, Part III, Commentary**).

In the second place, the crude birth rates for local areas may differ because disproportionate numbers of women of childbearing ages are in psychiatric hospitals for long periods, where they are not, in fact, ' exposed to risk ' of childbearing. In order to eliminate differences between local birth rates due to this cause also, the Area Comparability Factors mentioned in the previous paragraph are adjusted so that they also spread the numbers of women of childbearing ages in psychiatric hospitals over all areas of the country in proportion to the non-institutional populations.

The product of the crude birth rate and this adjusted Area Comparability Factor (col. 9 in **Table E**) is a rate which is standardised for sex and age structure—in particular for the relative numbers of women of childbearing ages—and, at the same time, makes allowance for the presence in or absence from the area of psychiatric hospitals with female patients of childbearing ages.

5. Fertility analyses

The fertility analyses in **Tables AA** to **TT** are based on information obtained under the Population (Statistics) Act, 1938, which operated from the 1st July 1938. **Tables AA** to **QQ** and **Table TT** are based on birth occurrences. **Tables RR** and **SS** are based on death registrations.

A fresh series of tables was introduced in the 1952 volume.

The analysis of legitimate maternities by mother's age, marriage duration and previous liveborn children in **Tables HH, II** and **LL,** is confined to maternities to women married once only. **Table MM** relates to legitimate maternities to women married once only, distinguishing parity, age and year of marriage for successive marriage cohorts.

Tables comparing the fertility of all married women and of those married once only and more than once respectively, were published in the 1955 *Statistical Review, Part III, Commentary*†.

Tables JJ and **NN** show estimates of women married once only, at risk of childbearing (a) in the calendar year 1959, by current age and marriage duration (**Table JJ**), and (b) between integral durations (wedding anniversaries‡) reached in 1958 and 1959, by calendar year of marriage and age at marriage (**Table NN**).

There is a fundamental difference between these two tables. **Table JJ** is needed for the calculation of legitimate maternity rates *per year of risk* (shown in **Table KK**). It gives the estimated *total numbers of years of married life* spent in the year at the ages and durations shown, and to each cell of the table a married woman contributes only the fraction of a year which she actually spent at that age and duration in 1959. (Most women contributed to several cells.) **Table NN** is needed for the calculation of legitimate fertility rates *per married woman* (shown in **Table OO**). It gives the *mean numbers of women* at risk at the specified durations who were married in the years and at the ages shown. Since 1956 it has related to the integral duration intervals ended in the year under review, spanning two calendar years of risk; in 1952 to 1955 it related to an integral calendar year of risk spanning two duration intervals.

Table MM was similarly modified in 1957; **Table OO** has been in this form since 1956 and in addition has been adjusted from maternity rates to live birth or fertility rates. It continues **Tables 2** (a)—(g) of **Appendix A** in the 1955 *Statistical Review, Part III, Commentary*†. **Table PP** shows mean family size (liveborn children) at integral durations reached in 1959, and continues **Tables 1** (a)—(g) of the same Appendix.

In **Tables AA, HH, II, LL** and **MM,** the " not stated " cases have been proportionally distributed and included with the " stated " cases. **Table QQ** shows the numbers of cases so distributed and the proportions per 10,000 total legitimate maternities.

† Obtainable from Her Majesty's Stationery Office, price 11s. net.
‡ The wedding date itself being duration 0 years.

Cases where the number of liveborn, now dead, children was not known by the informant at the registration of the birth have not been treated as " previous children not stated " since the current level of child mortality is sufficiently low to permit it to be assumed without risk of serious error that in these cases there were no such children.

6. Marriages

An analysis of marriages by manner of solemnization was included in the 1957 *Statistical Review, Part II**.

In **Table F**, the numbers of marriages shown for local areas are those solemnized in the area. Statistics are for entire counties including their associated county boroughs.

7. Marriage rates

The national marriage rates of **Tables C, D** and **H** are based upon total populations (before 1939 home populations, in 1914–19 total populations) (see Note 2 above).

8. Deaths

The deaths recorded (**Tables E, RR** and **SS**) are the total registered (i.e., including non-civilians) in the calendar period, the time lag between the date of occurrence and the date of registration being usually only a day or two. They have been assigned to the area of usual residence of the deceased. Accommodation provided under Parts III and IV of the National Assistance Act, 1948 is regarded as the place of residence of persons dying there. Before 1st January 1958, chronic sick and psychiatric hospitals were similarly treated for this purpose but from that date the method of classification was modified, the main change being that a death in such a hospital is now assigned to the area of occurrence only if the deceased had been there six months or more. If the deceased had been there less than six months the death is transferred to the area of previous usual residence.

In some small areas the numbers of deaths may also have been appreciably affected by the *opening, closing or change of use* of certain institutions, so that figures may not be comparable with those of earlier years.

9. Death rates

The general death rates of **Table E** are based on total deaths and home populations.

The crude death rates for local areas in **Table E** (col. 14) may not be comparable one with another. In the first place, the populations on which they are based may have widely differing structures by sex and age. In order to eliminate differences between local death rates due to this cause an Area Comparability Factor is calculated (as described on page 57 of the 1954 *Statistical Review, Part III, Commentary*†).

In the second place, the populations on which the crude death rates are based may include a disproportionate number of invalids if there are certain types of hospital in the area. In order to eliminate differences between local death rates due to this cause the Area Comparability Factors mentioned in the previous paragraph are adjusted so that they also spread the deaths and the populations in chronic sick and psychiatric hospitals over all areas of the country in proportion to the non-institutional populations.

The product of the crude death rate and this adjusted Area Comparability Factor (col. 15 in **Table E**) is a rate which is standardised for sex and age structure and, at the same time, makes allowance for the presence in or absence from the area of chronic sick or psychiatric hospitals.

10. Migration

Table S shows various data on migration and balance of civilian passenger movement. Parts (a) and (b) are compiled from Board of Trade returns.

Part (a) shows balance of civilian passenger movement and relates, with certain shown exceptions, to travel by all routes to and from the United Kingdom. Part (b) shows balance of permanent migration and relates to travel by the long sea routes only. The permanent migration balance of part (b) is included in the passenger movement balance of part (a).

In parts (a) and (b) the United Kingdom includes the Irish Republic prior to 1st April 1923. Inward balances are distinguished by a *plus* sign and outward balances by a *minus* sign.

In part (b) the terms " permanent migration " and " long sea routes " have the following meaning:

Permanent migration — a declared intention by the passenger to reside for more than a year in the country of destination.

---

* Published by Her Majesty's Stationery Office, now out of print.
† Obtainable from Her Majesty's Stationery Office, price 8s. net.

Long sea routes — excluding travel to and from all ports in Europe, which is taken for this purpose as including all Mediterranean islands, all ports in Turkey and all ports in the U.S.S.R. other than those on the Pacific seaboard.

Part (c) shows the intercensal population balance by migration for England and Wales. This is obtained by deducting the excess of births over deaths, the natural increase, from the intercensal increase of population. Net gains by migration are shown by a *plus* sign and net losses by a *minus* sign.

11. Register of electors

Table U shows the numbers of parliamentary electors on the February 1959 Register for each parliamentary constituency as constituted at the date of the general election held on 8th October 1959. The numbers of votes cast at by-elections held on the February 1959 Register and the acreage of each parliamentary constituency are also shown.

The numbers of votes cast at by-elections held during the first six weeks of the calendar year are shown in footnotes to **Table U** in the preceding year's volume.

The numbers of local government electors are shown in **Table V** with an analysis of local elections.

12. International tables

Information for the completion of **Tables W, X, Y** and **Z** has been obtained from United Nations publications and from official sources.

13. Changes in boundaries

Areas which have undergone a change of boundary on 1st April are identified in **Table E** by an asterisk(*); areas created during the year are identified by the sign (†), while areas abolished are indicated by the sign (‡). Statistics shown for the year for such an area relate to the area as constituted in the respective parts of the year before and after the boundary change; in consequence the base population used in **Table E** for the calculation of birth and death rates, which must be a weighted average of the populations for these two parts of the year, may differ from that included in Part (iii) of the Appendix and **Table A4** which relates to the area constituted *after* the boundary change.

14. Indication of reliability

Rates given as 0 indicate that the actual rate is less than one half of a unit. A dash (—) in any column indicates that there were no events. Where a cell has been left blank no denominator is available.

Rates based upon less than 20 events are distinguished by italic type as a warning to the user that the smallness of the experiences may affect their reliability as a measure of the underlying mortality.

Numbers

If d represents the deaths in an area and p the population in that area then, if d/p is small, the standard error (s.e.) of d is approximately $\sqrt{d}$ assuming that the deaths are independent of one another. Clearly, the larger the number of deaths the smaller will be the proportionate variability. A deviation either way of twice the s.e. may be expected about once in 20 times. Using this criterion one might expect towns each averaging 20 deaths per year to yield in the same year numbers ranging between 11 and 29 without such differences having any statistical significance. Alternatively it could be said that if 20 deaths were recorded for a town, this number would have a 95 per cent confidence interval of approximately ± 9, there being a 95 per cent chance that the underlying mortality is represented by a number of deaths within this interval.

If d is thought to be an extreme variation it would be more reliable to use as the standard error not $\sqrt{d}$ but $\sqrt{d'}$ where d' is the number of deaths expected if some standard rate (e.g. the national rate) were applied.

Rates

The appropriate standard error of a death rate when d represents the number of deaths and p the population is

$$\frac{\sqrt{d}}{p} \text{ or } \frac{m}{\sqrt{d}}$$

where m is the death rate. The difference between two local death rates m_1 and m_2 can only be regarded as significant if it amounts to more than twice the standard error of the difference, viz.

$$2\sqrt{\frac{m_1^2}{d_1} + \frac{m_2^2}{d_2}} \quad .$$

Comparison of adjusted rates

Before comparisons are made, other known sources of variation (such as differences in the sex and age composition of the population) must be removed. If C is the local death Area Comparability Factor, then mC is to be compared with m', the national death rate. The s.e. of mC is

$$\sqrt{\frac{mC}{p}}$$

and

$$mC \pm 2\sqrt{\frac{mC}{p}}$$

is to be compared with m'. As already indicated, m' can be used instead of m in the calculation of the s.e.; m' has the advantage of itself having a small sampling error.

15. Definition of areas

London A.C.—Administrative County of London which consists of the City of London (including the Inner and Middle Temples) and the metropolitan boroughs.

C.B.—county borough; **M.B.**—municipal borough; **Met.B.**—metropolitan borough; **U.D.**—urban district; **R.D.**—rural district.

16. Standard regions

The constitution of the standard regions of England and Wales used in this volume (with the exception of **Tables F** and **M** where the whole of Dorset has been included in the South Western Region) is as follows:

* On 1st April 1959 the administrative county of Southampton was renamed Hampshire.
The constitution of the standard regions has been changed by the transfer of Dorset (except Poole M.B.) from the Southern Region to the South Western Region.

17. Conurbations

The conurbation areas used in this volume are those which were agreed in 1950, under the aegis of the Interdepartmental Committee on Social and Economic Research and the Central Statistical Office, for the presentation of official statistics generally†. They each consist of an aggregation of entire local authority areas and are constituted as follows:

18. Urban and rural aggregates

Urban and rural aggregates relate to groups of local authority areas by type (all those within conurbations, urban areas, rural districts) and, in the case of urban areas, by size of enumerated population at the 1951 Census. "Urban areas" include boroughs and urban districts as defined under the Local Government Acts, and rural districts are also as defined by those Acts.

TABLE A2. Estimated population, total, home and civilian, by sex and age, as at 30th June 1959 } **England and Wales**

(Figures in thousands)

Note. The estimates of population described as " home " and " total " have the following content:

Home population — the population, of all types, actually in England and Wales.

Total population — the home population *plus* members of H.M. Forces belonging to England and Wales and serving overseas but *excluding* the Forces of other countries temporarily in England and Wales.

TABLE A5. Total population, projections from 30th June 1959 by sex and age

England and Wales

See explanatory note 2.

These projections have been prepared by the Government Actuary's Department in consultation with the General Register Office

Basis: Mid-1959 estimate of Total population of England and Wales (*including* members of H.M. Forces belonging to England and Wales and serving overseas but *excluding* the Forces of other countries temporarily in England and Wales).

Assumptions (1959 Revision):

Mortality: Death rates at the outset based on the experience in the five years 1954–58. At ages under 45 death rates are assumed to decline steadily over the next 25 years until at the end of that period they are about one half of the rates now being experienced. At ages over 45 the assumed rates of decline become progressively smaller as the age advances. It has been assumed that after 25 years the death rates at all ages will remain at the levels then reached.

Natality: In view of the increased number of births registered during 1959 the assumptions made in the previous projection for the years up to 1962 have been modified. The revised estimates give annual births averaging 730,000 in the first 5 years, thereafter rising gradually to 790,000 in 1997 and later years. (Male/Female ratio 1·06 throughout.)

Migration: Nil.

Projections involving children yet unborn are shown above the dotted line

TABLE M. Persons marrying in 1959, ages and conditions — **England and Wales, standard regions, Wales and conurbations**

Note. Within a standard region the separate figures for conurbations and remainders of regions are approximate, relating to groups of registration districts most nearly corresponding to the areas defined in *explanatory notes* 16 *and* 17. The mid-1959 home populations of these groups differed from those of the defined areas by the following percentages:

Tyneside Conurbation	+ 5·03	South East Lancashire Conurbation	+ 0·69	West Midlands Conurbation	+ 2·22
Remainder of Northern Region	— 1·81	Merseyside Conurbation	— 0·31	Remainder of Midland Region	— 2·16
West Yorkshire Conurbation	+ 4·39	Remainder of North Western Region	— 0·45	Greater London Conurbation	— 0·56
Remainder of East and West Ridings	— 3·02			Remainder of South Eastern Region	+ 1·63

Note. The deaths included in this table, as in all tables of the *Statistical Review*, are those which *occurred in* England and Wales. The numbers which occur outside England and Wales are not generally large enough to be of much significance except for certain years, e.g. for the periods 1914–18 and 1939–47 deaths of non-civilians and merchant seamen which occurred outside England and Wales are estimated at 577,000 and 240,000 respectively.

* These figures relate to passengers to and from ports in the Irish Republic and ports in the United Kingdom. The movement over the land frontier between the Irish Republic and Northern Ireland cannot be furnished.
† Approximate figures only.
†† Excluding air passengers prior to 1949.
§ Excluding air passengers.
¶ This figure cannot be reconciled with the separate totals because it includes air movement which cannot be allocated to specific areas.
‡ From 1956 includes passenger movement to and from the privately operated airports of Southend and Ferryfield.

(b) Balance of permanent migration. Citizens of the Commonwealth and the Irish Republic travelling by the long sea routes only.

TABLE AA. Maternities and births of all types, distinguishing legitimacy and, in the case of births, sex and whether live or still born

England and Wales 1959 occurrences

Note. The term "maternity" is used to denote a pregnancy which has terminated in the birth of one or more live or still born child(ren), the definition of a stillborn child being that contained in Section 41 of the Births and Deaths Registration Act, 1953. The maternity record differs from the birth record in that multiple births from a single pregnancy are counted as one maternity, while for the birth record each child born is reckoned as a separate unit.

TABLE II. Legitimate maternities to women married once only by mother's age at maternity and marriage duration

England and Wales 1959 occurrences

Note. 1 The classification by marriage duration now presented differs from that of 1951 and earlier years. As the month only and not the day of the mother's marriage is obtained at a birth registration the marriage duration cannot be exactly identified. The assignment procedure is now designed to secure that numbers shown in the table correspond as nearly as possible to the durations to which they are assigned.

2 Cases in which the mother's age or year of marriage were not stated (see Table QQ) have been proportionally distributed and included with the stated cases.

TABLE RR. Infertility of deceased married women by certain causes of death

England and Wales
1959 registrations

Note. The columns distinguish deaths according to whether the deceased was reported
(a) as having had no children by any husband, i.e. infertile,
(b) as having had children by a husband, i.e. fertile.
Deaths in which the record of fertility was not reported are excluded from the table.
An asterisk (*) denotes that the total number of cases (infertile plus fertile) was less than 50 and that in view of the unreliability of inferences based on small numbers, proportions have not been calculated. Proportions based on between 50—250 cases are shown in italics.
